

Omega Canine Emulsion

INVENTORS Jacob Spinnler Benadè; Margaretha Opperman

Omega Canine emulsion combines the benefits of Omega-3, Carotene and Vitamin E for the benefit of man's best friend. This product has been approved by the RSA Department of Agriculture, Forestry and Fisheries and has a number of approvals. Omega Canine emulsion has also been approved in Canada. The product comes in a squeeze-bottle, which makes dispensing of the emulsion onto food easy. The product has a smoky flavour and is liked by canines. Reports by owners claim that it improves the coat of the animals, becoming shinier and that animals are more active and show general improvement in their skin condition. As dogs are prone to iodine deficiency, the emulsion also contains iodide to supplement iodine stores. This product is unique in RSA and the world.

BENEFITS

- Omega-3 fatty acids are essential for good health, brain function and normal growth and development
- Unique combination of high quality omega-3 oils as well as 11 different carotenes and 5 different forms of vitamin E
- Contains no artificial colourants or preservatives and adheres to all international recommendations regarding pesticide and heavy metal contents

OFFERING

The product is sold in South Africa and Africa through Sozo Food. We are seeking licensees who would like to license and commercialize the product in other territories.
